ICR roles: who may Hire, Sell, Post a Requirement and Advertise

Reference for the ICR mobile app (icr-mobile). Taken from the portal's API guards and services on `main`, 2 November 2026. The API is the enforcement truth; the app should show and hide controls to match it, and show the API's refusal sentence where a role is turned away.

1. The roles

A person has one role *at a time*, and it is the role of the company they are currently acting for. With no company active, the role is the person's own (`personalRole`), which is PROFESSIONAL for every self-serve account. Switching company changes the role and returns a fresh token pair. The app reads the role from `GET /auth/me` (`role`, `companyId`, `personalRole`).

Role (API value)	Shown as	How it is obtained	Scope
PROFESSIONAL	Professional	Every self-serve sign-up. Also a plain member of a company.	The person's own career, mentoring, learning, community.
COMPANY_ADMIN	Company Admin	Founding a company page (`POST /me/companies`), or an invite that carries this role.	The whole company: it buys, sells and hires.
BUYER	Buyer	Invite or add by a company admin.	Procurement for the company. No hiring, no selling.
VENDOR	Seller	Invite or add by a company admin (a VENDOR may invite other VENDORs).	Selling for the company, and procurement. No hiring.
BRANCH_ADMIN	Office Admin	Invite, placed at an office.	Hiring for one office and everything beneath it.
RECRUITER	Recruiter	Invite, placed at an office.	Hiring for one office and everything beneath it.
HIRING_MANAGER	Hiring Manager	Invite.	Interview feedback on the panels assigned to them. Nothing else.
SUPER_ADMIN	Super Admin	ICR staff, set by ICR.	Everything, as the operator.
LEARNING_ADMIN	Learning Administrator	ICR staff.	The Learning Center catalogue only.
PARTNER_ADMIN	Partner Administrator	ICR approves a partner institute.	One institute's courses only.

GUEST still exists in the enum but no account holds it. Never branch on it.

2. The answer in one table

Yes allowed by role **Yes, if** allowed by role but gated on company state or plan (see the notes)
No the API refuses the role outright (HTTP 403, "Insufficient role permissions")

Role	Hire post a job, run applicants	Sell supplier listing, catalogue, bid	Post Requirement RFQ or enquiry	Advertise supplier placement	Advertise boost a job
COMPANY_ADMIN	**Yes, if verified**	**Yes, if listing**	**Yes**	**Yes, if Gold plan**	**Yes, if verified**
VENDOR (Seller)	**No**	**Yes, if listing**	**Yes**	**Yes, if Gold plan**	**No**
BUYER	**No**	**No**	**Yes**	**No**	**No**
BRANCH_ADMIN (Office Admin)	**Yes, if verified; own office**	**No**	**No**	**No**	**Yes, if verified; own office**
RECRUITER	**Yes, if verified; own office**	**No**	**No**	**No**	**Yes, if verified; own office**
HIRING_MANAGER	**No**	**No**	**No**	**No**	**No**
PROFESSIONAL (no company)	**No**	**No**	**No**	**No**	**No**
SUPER_ADMIN	**Yes**	**Yes, any company**	**Yes, for ICR**	**No (manages them)**	**Yes**
LEARNING_ADMIN	**No**	**No**	**No**	**No**	**No**
PARTNER_ADMIN	**No**	**No**	**No**	**No (features courses instead)**	**No**

> **The rule behind the table.** Every one of the four actions is done *for a company*. A person acting as themselves (PROFESSIONAL with `companyId` null) can do none of them. The fix the app should offer is always the same: create a company page (which makes the person its COMPANY_ADMIN) or switch to a company they already belong to. Staff roles (SUPER_ADMIN, LEARNING_ADMIN, PARTNER_ADMIN) are personal and can never join a company.

3. Hire

Roles: `RECRUITER_TIER` = SUPER_ADMIN, COMPANY_ADMIN, BRANCH_ADMIN, RECRUITER. This is the guard on every job write (`POST /jobs`, `PATCH /jobs/:id`, `DELETE`, submit for review, screening questions), the applicant pipeline (`GET /jobs/:id/applications`, stage moves, notes), talent search (`/talent/*`), invite-to-apply (`POST /job-invites`) and hiring campaigns.

HIRING_MANAGER is *not* in the tier. It may only read and give feedback on interviews assigned to it (`GET /interviews/mine` , `GET /interviews/:id` , feedback). It cannot see the job list, the pipeline or candidates.

What the role alone does not give

Gate	Rule	Where the app reads it
Company verification	A draft can always be written. Moving a job to OPEN (publish, or create with status OPEN) is refused until the company is verified: either its employer verification (the company check, filed at `/company?tab=verification`) is VERIFIED, or its supplier listing is at trust level Verified or above. A company whose verification ICR withdrew (SUSPENDED) cannot publish even with a Verified listing. Refusal: "Verify your company before publishing jobs. Your drafts are saved..."	`GET /employer-verification/gate` → `canPublishJobs` , `canRevealCandidateContact` , `canMessageCandidates` , `canInviteToApply` , `teamSeatsRemaining` (3 while unverified), `talentResultCap` (20 while unverified), `status` , `decisionNote` .
Who files the company check	Only COMPANY_ADMIN (and staff): `POST /employer-verification/submit` . A recruiter at an unverified company must ask an admin.	`GET /employer-verification/me` for the dossier's state.
Plan limit on live posts	Benefit `jobs.livePosts` on the Job Portal plan (audience COMPANY). Counts OPEN plus IN_REVIEW. Unlimited on every plan until staff set a number. Refusal: "Your plan includes N live job posts. Close or pause a live post to publish another."	The 403 message on publish. No pre-check endpoint; show the server's message.
Completeness	`jobPublishBlockers` (shared): title, description of 120+ plain characters, a skill, a country, ordered ranges, per-city openings, https link for external apply, openings 1 to 999. Enforced on every move into OPEN or IN_REVIEW.	Shared rule in `@icr/shared` ; the app mirrors the checklist.
Office scope	BRANCH_ADMIN and RECRUITER see and edit only the jobs of their office and the offices beneath it. A member of an office-scoped role with no office at a company that has offices sees only their own work.	Lists are already filtered by the API.
Review	Instead of publishing, a recruiter may submit for review (`POST /jobs/:id/submit-review`). Staff approve or return it. A job in review holds a live-post place.	Job status IN_REVIEW.
Suspended company	A company ICR suspended may do nothing for itself. `UserDto.companySuspension` is set; every company write is refused.	`GET /auth/me` .

Side rule: a person holding COMPANY_ADMIN, BRANCH_ADMIN or RECRUITER at a company (`JOB_POSTER_ROLES`) may not apply to that company's own jobs. Any other member may.

4. Sell

Roles: SUPER_ADMIN, COMPANY_ADMIN, VENDOR on every supplier write: create the listing (`POST /vendors` , "Start selling"), edit it (`PATCH /vendors/:id`), request a higher trust level (`PATCH /vendors/:id/request-upgrade`),

products and services (`POST/PATCH/DELETE /products`, `/services`), the open requirements board (`GET /rfq/open`), invited requirements, bids (`POST /rfq/:id/bids`), pre-qualification, and the supplier's own access summary (`GET /vendors/me/access`). BUYER is refused all of these.

Selling is switched on by the listing, not by the role

- A company sells once it has a `Vendor` row (one per company). "Start selling" creates it with no form: categories come from the company's services, service areas from its head-office city. Never gate selling on the company's type.
- Products and services can be added before the listing exists (they attach to the company), but nothing is shown in Supplier Mart and no bid can be placed until the listing exists.
- Only the company's own listing may be edited. `companyId` and `isPremium` are set by ICR, never by the supplier.

What the role alone does not give

Gate	Rule	Where the app reads it
Bidding needs trust level Verified	A bid on a requirement, or a reply to an enquiry, is refused until the listing's `verificationLevel` is Verified (level 2 of 5) or above. A company whose employer verification is approved starts its listing at Verified. Otherwise the supplier asks for the level at `/company?tab=verification` and ICR reviews it (self-request goes up to Certified).	`GET /vendors/me/access` → `vendorId`, `verified`, `verificationLevel`, `pendingLevel`, `verificationStatus`, `docsRequestMessage`, `canBid`, `canRespondToEnquiry`, `listingStartsVerified`.
Monthly bid allowance	Benefit `rfq.bidsPerMonth` on the Market Place plan (audience SUPPLIER). Free plan: 3 formal RFQ bids a calendar month (staff-editable). Enquiry replies are free. Refusal names the plan that includes more.	`bidsUsed`, `bidLimit` (null = unlimited) on the same endpoint.
Buyer contact details	Benefit `rfq.revealBuyerContact`, Silver and above. `GET /rfq/:id/contact` spends the allowance and is frozen while the company is suspended.	`canRevealContact`.
Listing size	`listing.items` (products plus services) and `listing.categories`: unlimited on every plan until staff set a number.	The 403 message on add.
Early access	`rfq.earlyAccess`: without it a public requirement appears on the board some hours after publication, unless the buyer invited the supplier.	Board contents.

Refusal sentences the app will see: "Your account is not linked to a company.", "You can only list your own company.", "Your company has no supplier listing yet. Create one to respond.", "Only suppliers can place bids", "Your vendor profile must be verified...".

5. Post a Requirement

Roles: SUPER_ADMIN, BUYER, COMPANY_ADMIN, VENDOR on `POST /rfq`, `PATCH /rfq/:id`, publish, close, cancel, delete, invites, stage, shortlist, screening responses, award, and the owner's views (`GET /rfq/mine`,

`/rfq/:id/bids`, `/rfq/:id/conversations`). A VENDOR may post because one company both buys and sells.

BRANCH_ADMIN, RECRUITER and HIRING_MANAGER are refused outright. The app already words this before the API has to: "Posting and running requirements is for a company's admins and buyers…" (`RfqViewer.cannotPostMessage`).

What the role alone does not give

Gate	Rule
An active company	A requirement belongs to a company. With `companyId` null the API refuses: "Requirements are posted for a company. Register your company, or switch to one you belong to, then post again." Staff post for ICR.
Who runs it afterwards	`managesRequirement`: any BUYER, COMPANY_ADMIN or VENDOR of the *same company* (and staff). A colleague may publish another's draft and run their requirement. No office scoping applies.
Kinds	A requirement sent to named suppliers ("Request a quote" on a profile) is an *enquiry* and goes out at once. An open one is an *RFQ*, created as draft or published; it must pass the composer's rules (`assertRequirementLogic`) to go live, and may have pre-qualification.
Phone	If the requirement has no contact phone and the poster's profile has none, the API asks for one (`PHONE_NEEDED`) and saves it to the profile.
No plan limit	There is no plan cap on the number of requirements a company posts. Buyers' plan benefits are on the Job Portal (COMPANY) audience; the buyer directory and alerts are supplier-side benefits.
Signed-out path	The public quote form (`POST /quotes`, the website's `/quote`) takes a request from anyone, throttled to 5 a minute per IP. It is a marketing lead, not an RFQ, and does not appear in My Requirements.
Tenders	Tenders (`/tenders`) are posted by ICR staff only. Members read them.

6. Advertise

"Advertise" is four different products with four different buyers. The website's `/advertise` page is only the first.

Product	Who may buy	Extra conditions	Endpoints
Supplier placement DIRECTORY (first in Supplier Mart) and HERO (homepage card or banner, reviewed by ICR before it runs). 1, 3, 6	VENDOR or COMPANY_ADMIN with a supplier listing. The website page is `RequireRole [VENDOR, COMPANY_ADMIN]`; the API's `resolveTarget` refuses every other role ("Supplier placements are	Plan flag `promotions.featuredEligible`, **Gold and above** on the Market Place plan. Otherwise the quote returns `blockedReason` "Featured placement is not included in your plan. <plan> includes it." Enterprise includes one directory placement a period (`promotions.includedDirectoryPlacement`), spent before anything is charged. Referral credits can also pay for a placement (`POST /promotions/redeem-credit`).	`GET /promotions/quote?sku=&months=` (any signed-in user; read `blockedReason`), `POST /promotions/checkout`, `GET /promotions/mine`. Payment is PayU on the website; the app opens the gateway externally.

Product	Who may buy	Extra conditions	Endpoints
or 12 months.	bought by the supplier.") and refuses a company with no listing.		
Job boost 14 days (₹1,499) or 30 days (₹2,499) of prominence on the job board.	`RECRUITER_TIER`: COMPANY_ADMIN, BRANCH_ADMIN, RECRUITER (within their office scope), SUPER_ADMIN.	The job's company must be verified ("Verify your company before boosting a job.") and the job must be OPEN ("Only a live job can be boosted."). Gold and Enterprise Job Portal plans include boosts (`jobs.includedBoosts`: 2 and 5 a period), used before any charge.	`GET /jobs/:id/boost-options` (`options`, `allowance`, `blockedReason`), `POST /jobs/:id/promote`, `DELETE /jobs/:id/promote`.
Featured mentor	Any member whose own mentor profile is APPROVED, whatever their company role. Not a role gate at all.	"Only an approved mentor can be featured." Bought from the mentor's dashboard.	Same `/promotions/quote` and `/checkout` with `sku=FEATURED_MENTOR`.
Featured course / institute	PARTNER_ADMIN, or the COMPANY_ADMIN of a company ICR approved as a learning partner (`isPartnerActor`).	The course must be PUBLISHED and the institute's own; the institute must be active.	`sku=FEATURED_COURSE` with `targetId`, `sku=FEATURED_INSTITUTION`.

SUPER_ADMIN does not buy placements. It prices them (`PATCH /promotions/products/:sku`), lists them all, edits, refunds and reviews hero placements.

7. Related gates the app will meet

Action	Roles	Notes
Create a company page (`POST /me/companies`)	Any signed-in person	Becomes its COMPANY_ADMIN and switches to it. 5 an hour. Staff roles cannot join a company.
Edit the company profile (`PATCH /companies/me`)	`COMPANY_PROFILE_EDITORS`: SUPER_ADMIN, COMPANY_ADMIN, VENDOR, BUYER	GST and PAN lock once verified; legal name and organisation type lock once set.
File the company check (employer KYC)	COMPANY_ADMIN, SUPER_ADMIN	Approval also makes the company a Verified supplier.
Invite team, approve join requests, add people (`/team/*`)	`TEAM_ADMINS`: SUPER_ADMIN, COMPANY_ADMIN, BRANCH_ADMIN, VENDOR	Roles an invite may carry: COMPANY_ADMIN, BRANCH_ADMIN, RECRUITER, HIRING_MANAGER, VENDOR, BUYER. A VENDOR may invite VENDORs only. Change a member's role: COMPANY_ADMIN only. Unverified companies: 3 seats.

Action	Roles	Notes
Buy a Job Portal plan (hiring; audience COMPANY)	COMPANY_ADMIN, BUYER	Billed to the company.
Buy a Market Place plan (selling; audience SUPPLIER)	VENDOR, COMPANY_ADMIN	Billed to the company. Gold unlocks supplier placements.
Buy a Professional plan (audience SEEKER)	Every person role	Held by the person, follows them across companies.
Apply, save and follow jobs; job alerts	`PERSON_ROLES` (every non-staff role)	Except the company's own job posters, who may not apply to its jobs.
Mentoring, learning, community, events, messaging	No role gate	A BUYER or VENDOR can be an approved mentor.

8. What this means for the app

- **Decide by role first, then by state.** Role from `GET /auth/me` hides or shows the entry points (Hire, Sell, Post, Advertise). State from the capability endpoints decides whether the button works or shows a notice: `GET /employer-verification/gate` for hiring and boosts, `GET /vendors/me/access` for selling and bidding, `GET /promotions/quote` for placements, `GET /jobs/:id/boost-options` for a boost. Never re-derive verification or plan limits in the app.
- **The role changes with the active company.** After `POST /me/companies`, `/switch`, accepting an invitation or leaving, adopt the returned token pair and drop every cached query. The same person can be COMPANY_ADMIN at one company and BUYER at another.
- **The "no company" case has one fix.** A PROFESSIONAL acting as themselves is refused all four actions. Offer "Create a company" or "Switch company" (the website's `NoCompany`), not a sign-up.
- **Show the server's sentence.** Every refusal above arrives as a 403 with a message already in the reader's language. Where the message carries a `code` (`PHONE_NEEDED.<who>`), act on the code, not the English.
- **What the app already encodes** (keep these in step with this document): `hiringRoles` = RECRUITER_TIER (hiring_models.dart), `jobPosterRoles` (api_jobs_repository.dart), `RfqViewer.canPost` / `canSell` (rfq_models.dart), `HiringAccess.canPublish` from the employer gate.
- **Payments stay on the website.** Placements, boosts and plans check out through PayU; the app opens the gateway externally (`openExternal`) and re-reads the record afterwards.
