Hyderabad Workplace Experience Benchmark 2026

Market notes and operating metrics for Hyderabad from the ICR Hyderabad Chapter

This note summarises what ICR Hyderabad Chapter members told us in 2026 about running hyperscale GCC campuses, new builds and smart-building programmes. It is written for facilities leaders, procurement teams and service providers who want a shared set of reference numbers before the next budget cycle.

1. Market snapshot

Metric	Value
Grade-A office stock	108 million sq ft
New supply under construction	26 million sq ft
Median IFM cost per sq ft per month	Rs 31
Share of new buildings with IGBC or LEED rating	72%
Share of campuses piloting AI-based energy optimisation	29%

2. Themes from the Chapter

- New buildings arrive with sophisticated systems and thin operations teams
- Data centres and life-science campuses raise the bar on resilience and compliance
- Smart-building programmes depend on clean BMS data and clear ownership
- Rapid hiring means handover quality decides first-year performance

3. Operating priorities for the year

1. Raise preventive-maintenance compliance to 95% and report it monthly.
2. Move to a single SLA scorecard across hard and soft services.
3. Meter the largest controllable loads and publish the intensity per seat.
4. Run one drill each quarter: fire, power failure, lift entrapment or water ingress.

4. How to use these numbers

Values are medians from member submissions validated by the Chapter committee and are indicative, not contractual. Use them to start a conversation with your provider, and then measure your own site. Members who would like to contribute data for the next edition should contact the committee.
