Mumbai Workplace Experience Benchmark 2026

Market notes and operating metrics for Mumbai from the ICR Mumbai Chapter

This note summarises what ICR Mumbai Chapter members told us in 2026 about running high-rise towers, BFSI campuses and coastal-climate buildings. It is written for facilities leaders, procurement teams and service providers who want a shared set of reference numbers before the next budget cycle.

1. Market snapshot

Metric	Value
Grade-A office stock	121 million sq ft
Share of stock in high-rise towers (30+ floors)	37%
Median IFM cost per sq ft per month	Rs 44
Lift waiting-time complaints per 1,000 seats	21
Share of towers with a full facade maintenance plan	48%

2. Themes from the Chapter

- Vertical transport capacity is the binding constraint at the 9 to 10 am peak
- Coastal air accelerates corrosion on plant, railings and curtain-wall fixings
- BFSI security and business-continuity rules shape every service contract
- Space is expensive, so fit-out density and meeting-room supply are board-level topics

3. Operating priorities for the year

1. Raise preventive-maintenance compliance to 95% and report it monthly.
2. Move to a single SLA scorecard across hard and soft services.
3. Meter the largest controllable loads and publish the intensity per seat.
4. Run one drill each quarter: fire, power failure, lift entrapment or water ingress.

4. How to use these numbers

Values are medians from member submissions validated by the Chapter committee and are indicative, not contractual. Use them to start a conversation with your provider, and then measure your own site. Members who would like to contribute data for the next edition should contact the committee.
