Housekeeping Service Levels and Inspection SOP

Frequencies, standards and the monthly audit method for office and campus housekeeping

This SOP sets the minimum service levels for housekeeping at member sites and the method the facilities team uses to inspect them. It is written for a contractor-delivered service but applies equally to in-house teams.

1. Service frequencies

Area	Task	Frequency
Workstations and open offices	Dust, wipe, bin collection	Daily
Meeting rooms	Reset, wipe, glass clean	After each use / daily
Washrooms	Clean, restock, odour control	Hourly checks, 4 full cleans a day
Pantries and cafeteria	Surface sanitising, floor scrub, bins	Continuous in service, deep clean nightly
Lobby and lifts	Mop, polish, glass, brass	Every 2 hours / daily
Windows and facade (low level)	Wash	Fortnightly

2. Quality standards

- Floors dry, free of residue and visibly clean at 1 metre
- Glass and mirrors streak-free; no fingerprints on lift doors
- Washrooms free of odour, with soap, tissue and sanitiser available at all times
- No overflowing bins; bin liners changed when two-thirds full

3. Inspection method

1. Inspect 10% of each area type each week, never the same spaces in the same order.
2. Score each item pass or fail against the standard with a photograph for every fail.
3. Calculate the monthly score as passes divided by items inspected; target 90% or better.
4. Share the scorecard with the supervisor within 24 hours; failed items are rectified within the shift.

4. Consumables and chemicals

- Use only approved chemicals with safety data sheets at the point of use
- Colour-code cloths and mops by zone to prevent cross-contamination
- Track consumable use per 1,000 sq ft and investigate months that move more than 10%

5. People

Supervisors brief every shift on priorities, deep-clean programmes and incidents. Staff receive induction on chemicals, manual handling and waste segregation within their first week, and a refresher every six months.
