RFP Evaluation Framework for IFM Contracts

A weighted scoring model and question set for integrated facility management tenders

Selecting an integrated facility management (IFM) provider is a decision with a five-year consequence. This framework gives procurement and facilities a shared scoring model that separates commercial, technical and delivery risk, and records the reasoning for audit.

1. Scoring model

Criterion	Weight	What good looks like
Technical approach and mobilisation plan	25%	Site-specific plan, named team, risk register
Experience and references	15%	Three comparable sites; references checked by phone
Technology and reporting	15%	CMMS, mobile, SLA dashboards, API access
Compliance and safety record	15%	Clean statutory history; safety statistics available
Commercial price (normalised)	25%	Lowest compliant bid scores 100
Social value and sustainability	5%	Local hiring, training, energy and waste plan

2. Questions to include

- Describe your first 90 days. Who is on site on day one and what is done in week one?
- Show a sample monthly SLA report from a comparable client (names removed)
- How do you control subcontractors and verify statutory documents?
- What is your manpower attrition and how do you retain supervisors?
- Explain your pricing: fixed fee, management fee, reimbursables and what you consider out of scope

3. Evaluation process

1. Compliance gate: reject bids missing mandatory documents before scoring.
2. Independent scoring: each panel member scores alone, then the panel meets to resolve differences of more than 20 points.
3. Site visits and presentations for the top three bidders.
4. Best and final offer on a clarified scope, then final scoring and approval.

4. Red flags

- A price more than 20% below the median with no explanation
- No named site manager
- Reluctance to share references
- Vague answers on statutory compliance
